Adventurours pianist John Salmon (whose articles on ornamenting—and improvising on— classical music will continue in the next issue) sent us this "second piano part" to Bach's Invention in B Flat. As it turns out, he was unfamiliar with another attempt along these lines, Louis Victor Saar's *A Second Part to the Fifteen Two-Part Inventions* the years: in September/October, 1985 and September/October, 1996).

"My original idea," he reports, "was to come up with a second treble line in the style of a trio sonata (which is the way I view this invention anyway), and in a pastoral style/mood (such as in the 'Sheep May Safely Graze' cantata), with a written-out continuo accompaniment. But the line as it came out of my head and hands spanned a bigger register than any traditional trio-sonata instrument, so it transcends slightly a trio-sonata concept.

"While my additional line may lack Bach's genius, it is, I believe, exactly the kind of thing Bach was constantly doing—rearranging, adding on, transposing, recontextualizing his and others' music. My idea lies somewhere between a true three-part invention and a trio sonata.

"I'm only really proud of two places in my modest effort: (1) the Thelonious Monkesque A-natural which is the last note of bar 14, clashing nicely with Bach's A-flat in the treble; and (2) the continuation of Bach's stretto in the added line, bars 17 and 18."

If you have two keyboards available, give it a try!

## A Duo Version Of

## Invention No. 14

Johann Sebastian Bach (1685-1750) Second Part by John Salmon
